About This Guide

This guide is a complement to Quick Installation Guide. The Quick Installation Guide instructs you on quick internet setup, and this guide provides details of each function and shows you the way to configure these functions appropriate to your needs.

Features available in this router may vary by model and software version. Router availability may also vary by region or ISP. All images, steps, and descriptions in this guide are only examples and may not reflect your actual router experience.

Conventions

In this guide the following conventions are used:

Convention	Description
<u>Teal Underlined</u>	Hyperlinks are in teal and underlined. You can click to redirect to a website or a specific section.
Teal	Contents to be emphasized and texts on the web page are in teal, including the menus, items, buttons and so on.
>	The menu structures to show the path to load the corresponding page. For example, Advanced > Wireless > MAC Filtering means the MAC Filtering function page is under the Wireless menu that is located in the Advanced tab.
 Note:	Ignoring this type of note might result in a malfunction or damage to the device.
 Tips:	Indicates important information that helps you make better use of your device.

Speed/Coverage Disclaimer

*Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput and wireless coverage are not guaranteed and will vary as a result of network conditions, client limitations, and environmental factors, including building materials, obstacles, volume and density of traffic, and client location.

More Info

- The latest software, management app and utility are available from the [Download Center](#) at <https://www.tp-link.com/support/>.
- The Quick Installation Guide can be found where you find this guide or inside the package of the router.
- Specifications can be found on the product page at <https://www.tp-link.com>.
- TP-Link Community is provided for you to discuss our products and share knowledge at <https://community.tp-link.com>.
- Our Technical Support contact information can be found at the [Contact Technical Support](#) page at <https://www.tp-link.com/support/>.

Chapter 1

Get to Know Your 4G LTE Router

This chapter introduces what the router can do and shows its appearance.

It contains the following sections:

- [Product Overview](#)
- [Panel Layout](#)

1.1. Product Overview

The 4G LTE Router shares the latest generation 4G LTE network with multiple Wi-Fi devices, anywhere you want.

With Ethernet ports and internal antennas, the router provides wired and wireless access for multiple computers and mobile devices.

With various features and functions, the router is the perfect hub of your home or business network.

1.2. Panel Layout

1.2.1. Top View

The router's LEDs (view from left to right) are located on the front panel. You can check the router's working status by following the LED Explanation table.

LED Explanation

Name	Status	Indication
 (Power)	On	The system has started up successfully.
	Flashing	The system is starting up or firmware is being upgraded. Do not disconnect or power off the router.
	Off	Power is off.
 (Internet)	On	Internet service is available.
	Off	Internet service is not available.

Name	Status	Indication
 (Wi-Fi)	On	The wireless function is enabled.
	Flashing	WPS connection is in progress. This may take up to 2 minutes.
	Off	The wireless function is disabled.
 (LAN)	On	At least one LAN port is connected to a powered-on device.
	Off	No LAN port is connected to a powered-on device or the LAN port is not connected properly.
 (Signal Strength)	On	Indicates the signal strength the router received from the mobile internet. More lit bars indicate a better signal strength.
	Off	There is no mobile internet signal.

Note:

1. If the Internet LED is off, please check your internet connection first. Refer to [Plug & Play with SIM Card](#) for more information about how to make internet connection correctly. If you have already made a right connection, please contact your ISP to make sure your internet service is available now.
2. If the Signal Strength LED is off, please check your Internet LED first. If your Internet LED is also off, please refer to Note 1. If your Internet LED is on, please relocate the router to a location where it can receive a strong mobile internet signal, such as near a window.

1.2.2. Back Panel

The following parts (view from left to right) are located on the rear panel.

Item	Description
POWER Port	For connecting the router to power socket via the provided power adapter.
LAN1/WAN, LAN2	For connecting to your PCs or other Ethernet network devices. In wireless router mode, the LAN2/WAN port is used for connecting to a Cable/FTTH/VDSL/ADSL device.
RESET/WPS	Press and hold this button until the Power LED starts flashing to reset the router to its factory default settings.
	To enable the WPS function, press this button about 2 seconds. If you have a WPS-supported device, you can press this button to quickly establish connection between the router and the client device.
External Antenna Ports	For connecting external antennas (not provided). For the external antennas to work instead of the router's internal antennas, you need to enable external antennas on the web page.

1.2.3. Bottom Panel

Item	Description
Nano SIM Card Slot	For holding the Nano SIM card to share internet.

Chapter 2

Connect the Hardware

This chapter contains the following sections:

- [Position Your 4G LTE Router](#)
- [Plug & Play with SIM Card](#)
- [\(Optional\) Install External Antennas](#)

2.1. Position Your 4G LTE Router

With the router, you can access your network from anywhere within the wireless network coverage. However, the wireless signal strength and coverage varies depending on the actual environment where your router is in. Many obstacles may limit the range of the wireless signal, for example, concrete structures, thickness and number of walls.

For your security and best Wi-Fi performance, please:

- Do not locate the router in the place where it will be exposed to moisture or excessive heat.
- Keep away from strong electromagnetic radiation source and electromagnetic-sensitive devices.
- Place the router in a location where it can be connected to the various devices as well as to a power source.
- Place the router in a location where it can receive a strong mobile internet signal.
- Make sure the cables and power cord are safely placed out of the way so they do not create a tripping hazard.

2.2. Plug & Play with SIM Card

Follow the steps below to connect your router.

1. Insert the Nano SIM card into the slot until you hear a click.

2. Connect the power adapter. The power source shall be near the device and shall be easily accessible.

3. Wait until the Internet LED is on, your router is connected to the internet successfully.

Note:

If the Internet LED does not turn on, please refer to [FAQ > Q4](#).

4. Connect your device to the router, then enjoy the internet!

Method 1: Wired

Connect your computer to the LAN port on the router via an Ethernet cable.

Method 2: Wirelessly

Use the default wireless network name (SSID) and password printed on the product label of the router to connect wirelessly.

2.3. (Optional) Install External Antennas

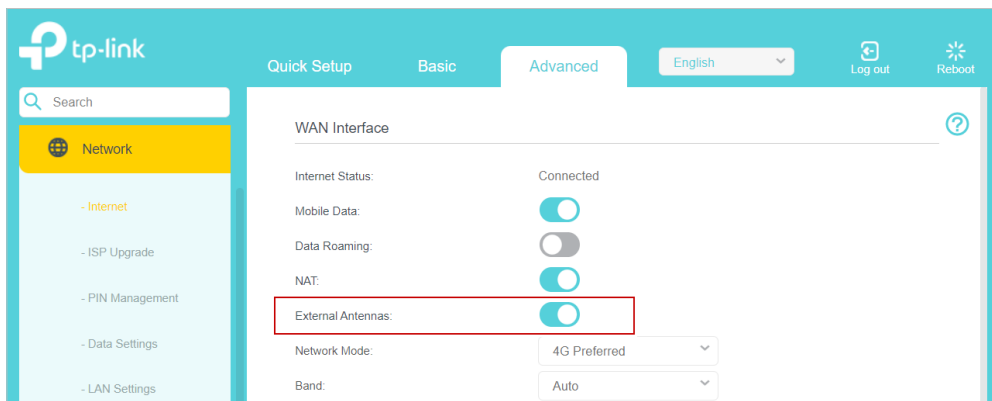

If you have external antennas, you can install them to strengthen the LTE Network.

1. Open the back cover.
2. Connect your external antennas.

3. Enable external antennas on the web management page.
 - 1) Launch a web browser and visit <http://tplinkmodem.net>. Create a password to log in.
 - 2) Go to [Advanced > Network > Internet](#).

3) Enable External Antennas.

Chapter 3

Log In to Your 4G LTE Router

With a web management page, it is easy to configure and manage the 4G LTE Router. The web management page can be used on any Windows, Macintosh or UNIX OS with a Web browser, such as Microsoft Internet Explorer, Mozilla Firefox or Apple Safari.

Follow the steps below to log in to your router.

1. If the TCP/IP Protocol on your computer is set to the static (fixed) IP address, you need to change its settings to obtain an IP address automatically. Refer to [FAQ](#) to configure your computer.
2. Launch a web browser and type in <http://tplinkmodem.net> or <http://192.168.1.1>. Set a password and click **Let's Get Started**.

The screenshot shows a web browser address bar with the URL <http://tplinkmodem.net>. Below the address bar is a form for creating a password. It includes a text input field labeled "New Password" with a key icon and a toggle for visibility. Below this are three radio buttons for password strength: "Low", "Middle", and "High". Below the radio buttons is another text input field labeled "Confirm Password" with a key icon and a toggle for visibility. At the bottom of the form is a large teal button labeled "Let's Get Started".

■ Note: For subsequent logins, use your password that you have created.

Chapter 4

Set Up Internet Connections

This chapter introduces how to connect your router to the internet. The router is equipped with a web-based Quick Setup wizard. It has many ISP information built in, automates many of the steps and verifies that those steps have been successfully completed. Furthermore, you can set up IPv6 connection if your ISP provides IPv6 service.

This chapter includes the following sections:

- [Use Quick Setup Wizard](#)
- [Create a Connection Profile](#)
- [Test Internet Connectivity](#)
- [Wireless Router Mode](#)

4.1. Use Quick Setup Wizard

To set up your router with several easy steps quickly:

1. Visit <http://tplinkmodem.net>, and log in with the password you set for the router.
2. Click **Quick Setup**, select your time zone, confirm the parameters with the information provided by your ISP in the **SIM** part and click **Next**.

Note:

Quick Setup is not available if your SIM card is locked. Unlock your SIM card according to the prompt.

The screenshot shows a configuration form for SIM settings. It includes the following fields and options:

- Profile Name: CMCC(default 1) (dropdown menu)
- PDP Type: IPv4 & IPv6 (dropdown menu)
- APN: cmnet (text input)
- Username: guest (text input)
- Password: **** (password input with toggle icon)
- Authentication Type: CHAP (dropdown menu)

At the bottom right, there are two buttons: **Back** and **Next**.

3. Follow the on-screen instructions to complete the setup.
4. To enjoy a more complete service from TP-Link (remote management, TP-Link DDNS, and more.), log in with your TP-Link ID or click Sign Up Now to get one. Then follow the instructions to bind the cloud router to your TP-Link ID.

The screenshot shows a login screen with the following content:

- Header: **Congratulations! Network setup successfully. Enjoy the Internet.**
- Text: For more TP-Link Cloud functions, please log in with your [TP-Link Cloud Account](#). (info icon)
- Input fields: TP-Link ID (Email) and Password (with toggle icon and [Forgot Password?](#) link)
- Buttons: **Log In**, **Register Now**, and **Log In Later**

Note:

During the quick setup process, you can change the preset wireless network name (SSID) and wireless password. Once done, all your wireless devices must use the new SSID and password to connect to the router.

4.2. Create a Connection Profile

If your ISP settings are not detected by the router, you can create an internet connection profile by following the steps below:

1. Visit <http://tplinkmodem.net>, and log in with the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [Internet](#) page.

WAN Interface

Internet Status: Disconnected

Mobile Data:

Data Roaming:

NAT:

External Antennas:

Network Mode: 4G Preferred ▾

Band: Auto ▾

Dial-up Settings

Network Search: Auto ▾

Profile Name: ▾

PDP Type: IPv4 ▾

APN:

Username:

Password: 

Authentication Type: None ▾

[Create Profile](#) Click this button to create a new dial-up profile. Up to 8 profiles can be added.

3. Click [Create Profile](#).

4. Specify the **Profile Name**, **Username** and **Password**. Select the **PDP Type**, **APN Type** and **Authentication Type** according to your ISP.

The screenshot shows a 'Create Profile' form with the following fields and values:

Field	Value
Profile Name:	Network 1
PDP Type:	IPv4
APN Type:	Static
APN:	internet
Username:	
Password:	
Authentication Type:	CHAP

At the bottom right of the form are two buttons: 'Cancel' and 'OK'.

5. Click **OK** to make the settings effective and the new profile will be used to set up a new connection.

Tips:

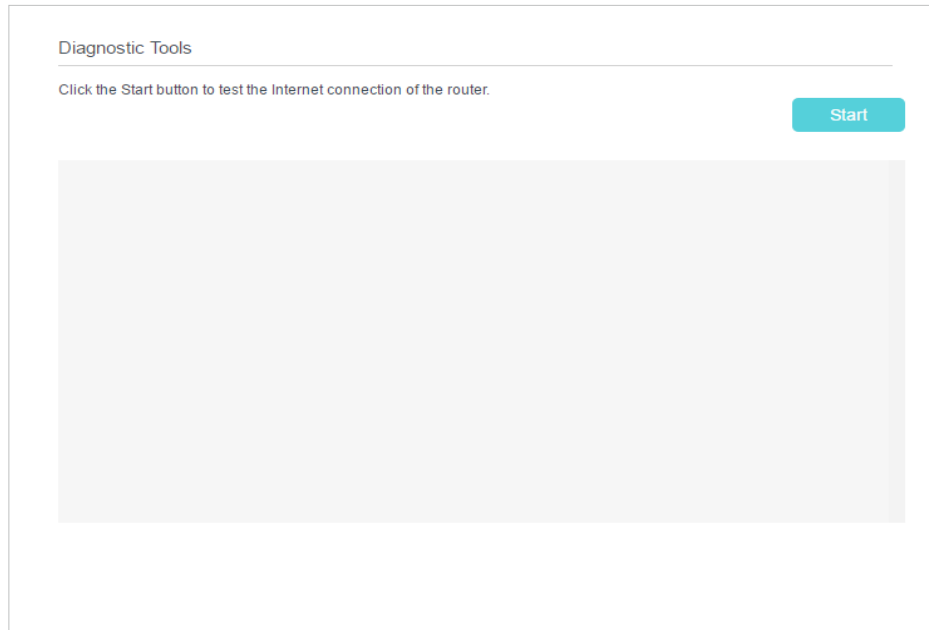

1. You can view all internet connections or edit connections that are set up manually on this page.
2. You can change the **Network Mode** to **4G Only** or **3G Only** according to your needs.

4.3. Test Internet Connectivity

After manually set up the internet connection, you need to know the internet connectivity. The router provides a diagnostic tool to help you locate the malfunction.

1. Visit <http://tplinkmodem.net>, and log in with the password you set for the router.

2. Go to [Advanced](#) > [System Tools](#) > [Diagnostics](#) page.

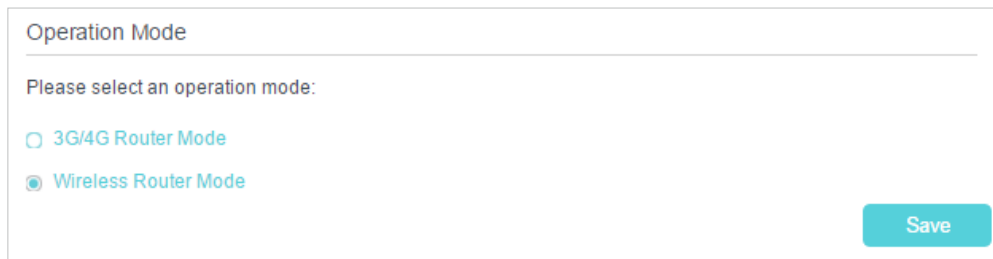

3. Click [Start](#) to test the internet connectivity and you will see the test result in the gray box.

4.4. Wireless Router Mode

The router support two operation modes, 3G/4G Router Mode and Wireless Router mode. If you already have a modem or your internet comes via an Ethernet cable from the wall, you can set up the router as a regular wireless router to share the internet.

1. Connect your router's LAN2/WAN port to the modem or the network port.
2. Visit <http://tplinkmodem.net>, and log in with password you set for the router.
3. Go to [Advanced](#) > [Operation Mode](#) page.

4. Select the [Wireless Router Mode](#) option and click [Save](#) to make the settings effective.

Note:

In wireless router mode, you can use 3G/4G network as a backup solution for internet access. When **3G/4G Backup** is enabled, your router will be directly connected to the 3G/4G network when the original network service fails. To enable or disable **3G/4G Backup**, go to **Advanced > Network > Internet**.

Internet Connections

[Refresh](#) [+ Add](#) [- Delete All](#)

WAN Interface Name	VLAN ID	Status	Operation	Modify
ipoe_1_d	N/A	WAN Disconnected	Connect

Chapter 5

TP-Link Cloud Service

TP-Link Cloud service provides a better way to manage your cloud devices. Log in to your router with a TP-Link ID, and you can easily monitor and manage your home network when you are out and about via the Tether app on your smartphone or tablet. To ensure that your router stays new and gets better over time, the TP-Link Cloud will notify you when an important firmware upgrade is available. Surely you can also manage multiple TP-Link Cloud devices with a single TP-Link ID.

This chapter introduces how to register a new TP-Link ID, bind or unbind TP-Link IDs to manage your router, and the Tether app with which you can manage your home network no matter where you may find yourself.

It contains the following sections:

- [Register a TP-Link ID](#)
- [Change Your TP-Link ID Information](#)
- [Manage the User TP-Link IDs](#)
- [Manage the Router via TP-Link Tether App](#)

5.1. Register a TP-Link ID

If you have skipped the registration during the Quick Setup process, you can:

1. Visit <http://tplinkmodem.net>, and log in with the password you set for the router.
2. Go to **Basic > TP-Link Cloud**.
3. Click **Register Now** and follow the instructions to register a TP-Link ID.

TP-Link Cloud

For more TP-Link Cloud functions, please log in with your TP-Link ID. ⓘ

Email

Password [Forgot password?](#)

Log In

No TP-Link ID?

Register Now

4. After activating your TP-Link ID, come back to the TP-Link Cloud page to log in. The first-time login TP-Link ID will be bound automatically to your cloud router as an **Admin**.

Note:

- To learn more about the Admin and User TP-Link ID, refer to [Manage the User TP-Link IDs](#).
- You can register another TP-Link ID via the Tether APP. Please refer to [Manage the Router via TP-Link Tether App](#) to install the app and register a new one
- If you want to unbind the admin TP-Link ID from your router, please go to **Basic > TP-Link Cloud**, click **Unbind** in the **Device Information** section.

5.2. Change Your TP-Link ID Information

Follow the steps below to change your email address and password of your TP-Link ID as needed.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID.
2. Go to **Basic > TP-Link Cloud**, and focus on the **Account Information** section.

- **Change your email address**

1. Click  behind the Email.
2. Enter the password of your TP-Link ID, then the new email address. And click **Save**.

Change Email

Password

New Email

Save

Note: New email or password may not sync to client devices immediately. Please log in again when your device is connected to the Internet to update account information.

- **Change your password**

1. Click  behind the Password.
2. Enter the current password, then a new password twice. And click [Save](#).

Change Password

Current Password

New Password

Low Middle High

Confirm Password

Save

Note: New email or password may not sync to client devices immediately. Please log in again when your device is connected to the Internet to update account information.

5.3. Manage the User TP-Link IDs

The first-time login TP-Link ID will be bound automatically to your router as an [Admin](#) account. An admin account can add or remove other TP-Link IDs to the same router as [Users](#). Admin account and User accounts both can monitor and manage the router locally or remotely, except that user accounts cannot:

- Reset the router to its factory default settings from the web management page or the Tether app.

- Add/remove other TP-Link IDs to/from the router.

5.3.1. Add an TP-Link ID to Manage the Router

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID.
2. Go to **Basic** > **TP-Link Cloud**, and focus on the **Bound Accounts** section.
3. Click **+ Bind**, enter another TP-Link ID as needed and click **Save**.

Note:

If you need another TP-Link ID, please refer to [Manage the Router via TP-Link Tether App](#) to install the app and register a new one.

4. The new TP-Link ID will be displayed in the Bound Accounts table as a **User**.

Bound Accounts				
+ Bind - Unbind				
<input type="checkbox"/>	ID	Email	Binding Date	Role
<input type="checkbox"/>	1	*****@****.com	16/11/2016	Admin
<input type="checkbox"/>	2	*****@****.com	16/11/2016	User

5.3.2. Remove TP-Link ID(s) From Managing the Router

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID.
2. Go to **Basic** > **TP-Link Cloud**, and focus on the **Bound Accounts** section.
3. Check the box(es) of the TP-Link ID(s) you want to remove and click **Unbind**.

Bound Accounts				
+ Bind - Unbind				
<input type="checkbox"/>	ID	Email	Binding Date	Role
<input type="checkbox"/>	1	*****@****.com	16/11/2016	Admin
<input checked="" type="checkbox"/>	2	*****@****.com	16/11/2016	User

5.4. Manage the Router via TP-Link Tether App

The Tether app runs on iOS and Android devices like smartphones and tablets.

1. Open the Apple App Store or Google Play and search the key word [TP-Link Tether](#) or simply scan the QR code to download and install the app.

2. Launch the Tether app, and log in with your TP-Link ID.

Note: If you don't have an account, create one first.

3. Click + on the top right corner and select [Router](#) > [3G/4G Router](#).
4. Follow app instructions to complete the process and then manager your router as needed.

Chapter 6

Network Security

This chapter guides you on how to protect your home network from cyber attacks and unauthorized users by implementing these four network security functions. You can protect your home network through the SPI firewall, or prevent certain users from accessing the specified service, even block Internet access completely by using Service Filtering. You can also block or allow specific client devices to access your network using Access Control, or you can prevent ARP spoofing and ARP attacks using IP & MAC Binding.

- [Protect the Network from Cyber Attacks](#)
- [Service Filtering](#)
- [Access Control](#)
- [IP & MAC Binding](#)

6.1. Protect the Network from Cyber Attacks

The SPI Firewall can prevent cyber attacks and validate the traffic that is passing through the router based on the protocol. This function is enabled by default, and it's recommended to keep the default settings.

Follow the steps below to configure Firewall.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Security](#) > [Firewall](#).

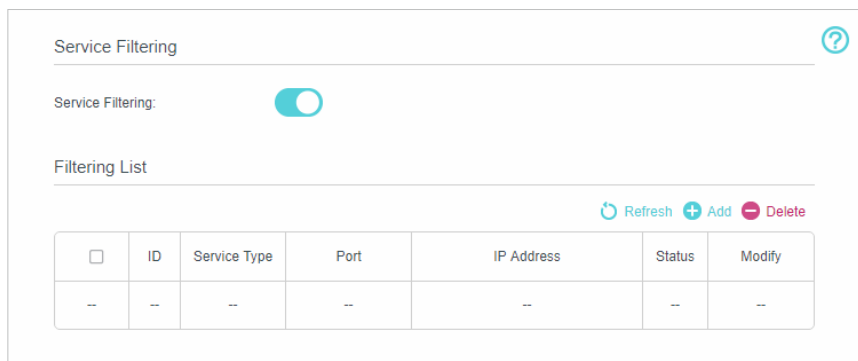

3. Enable [IPv4 SPI Firewall](#).

6.2. Service Filtering

With Service Filtering, you can prevent certain users from accessing the specified service, even block internet access completely.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Security](#) > [Service Filtering](#) and enable [Service Filtering](#).

3. Click [Add](#).

<input type="checkbox"/>	ID	Service Type	Port	IP Address	Status	Modify
--	--	--	--	--	--	--

Service Type:

 Protocol:

 Starting Port: (1-65535)

 Ending Port: (1-65535)

 Service Type:

 Filter Service For:
 Single IP Address
 IP Address Range
 All IP Addresses

4. Select a service type from the drop-down list and the following four fields will be auto-populated. Select **Custom** when your desired service type is not listed, and enter the information manually.
5. Specify the IP address(es) that this filtering rule will apply to.
6. Click **Save**.

6.3. Access Control

Access Control is used to block or allow specific client devices to access your network (via wired or wireless) based on a list of blocked devices (Blacklist) or a list of allowed devices (Whitelist).

I want to:

Block or allow specific client devices to access my network (via wired or wireless).

How can I do that?

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Security > Access Control** and enable **Access Control**.

Access Control
?

Access Control:

Access Mode

Access Mode: Blacklist Whitelist

[Save](#)

Devices in Blacklist

[+](#) Add [-](#) Delete

<input type="checkbox"/>	ID	Device Name	MAC Address	Modify
--	--	--	--	--

Online Devices

[↻](#) Refresh [🔒](#) Block

<input type="checkbox"/>	ID	Device Name	IP Address	MAC Address	Connection Type
<input type="checkbox"/>	1	[REDACTED]	192.168.1.100	40-8D-5C-06-5C-4A	Wired

3. Select the access mode to either block (recommended) or allow the device(s) in the list.

To block specific device(s)

- 1) Select [Blacklist](#) and click [Save](#).
- 2) Select the device(s) to be blocked in the [Online Devices](#) table.
- 3) Click [Block](#) above the [Online Devices](#) table. The selected devices will be added to [Devices in Blacklist](#) automatically.

To allow specific device(s)

- 1) Select [Whitelist](#) and click [Save](#).
- 2) Click [Add](#).

Devices in Whitelist

[+](#) Add [-](#) Delete

<input type="checkbox"/>	ID	Device Name	MAC Address	Modify
--	--	--	--	--

Device Name: [Scan](#)

MAC Address:

[Cancel](#) [Save](#)

- 3) Click [Scan](#) and select the device that you want to add in the whitelist, then the [Device Name](#) and [MAC Address](#) will be automatically filled in. Or enter the [Device Name](#) and [MAC Address](#) manually.
- 4) Click [Save](#).

Done!

Now you can block or allow specific client devices to access your network (via wired or wireless) using the [Blacklist](#) or [Whitelist](#).

6.4. IP & MAC Binding

IP & MAC Binding, namely, ARP (Address Resolution Protocol) Binding, is used to bind network device's IP address to its MAC address. This will prevent ARP spoofing and other ARP attacks by denying network access to a device with matching IP address in the Binding list, but unrecognized MAC address.

I want to:

Prevent ARP spoofing and other ARP attacks.

How can I do that?

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Security](#) > [IP & MAC Binding](#) and enable [IP & MAC Binding](#).

IP & MAC Binding

IP & MAC Binding:

Binding List

[+ Add](#) [- Delete](#)

<input type="checkbox"/>	ID	MAC Address	IP Address	Status	Enable	Modify
<input type="checkbox"/>	--	--	--	--	--	--

ARP List

[Refresh](#) [Bind](#)

<input type="checkbox"/>	ID	MAC Address	IP Address	Bound	Modify
<input type="checkbox"/>	1	40-8D-5C-06-5C-4A	192.168.1.100	Unloaded	

3. Bind your device(s) according to your needs.

To bind the connected device(s)

- 1) Select the device(s) to be bound in the [ARP List](#).
- 2) Click [Bind](#) to add to the [Binding List](#).

To bind the unconnected device

1) Click [Add](#).

The screenshot shows a web interface titled "Binding List". At the top right, there are two buttons: a green "+ Add" button and a red "- Delete" button. Below this is a table with the following columns: a checkbox, "ID", "MAC Address", "IP Address", "Status", "Enable", and "Modify". The table contains one row with dashes "--" in each cell. Below the table, there are two input fields: "MAC Address:" followed by a text box containing "-- -- -- -- --" and "IP Address:" followed by a text box containing ". . .". Below these fields is a checkbox labeled "Enable This Entry" which is checked. At the bottom right, there are two buttons: "Cancel" and "Save".

2) Enter the [MAC Address](#) and [IP Address](#) that you want to bind.

3) Select the checkbox to enable the entry and click [Save](#).

Done!

Now you don't need to worry about ARP spoofing and other ARP attacks.

Chapter 7

Parental Controls

This function allows you to block inappropriate, explicit and malicious websites, and control access to specified websites at specified time.

I want to:

Control the time of day my children or other home network users are allowed to access the internet and even types of websites they can visit.

For example, I want to allow my children's devices (e.g. a computer or a tablet) to access only www.tp-link.com and wikipedia.org, from 18:00 (6PM) to 22:00 (10PM) on weekdays only.

How can I do that?

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Basic](#) or [Advanced](#) > [Parental Controls](#) and enable [Parental Controls](#).

Parental Controls ?

+ Add a New Keyword

-

Save

9. Click **Add a New Keyword**. You can add up to 200 keywords for both Blacklist and Whitelist. Below are some sample entries to allow access.
 - 1) Enter a web address (e.g. www.tp-link.com) or a web address keyword (e.g. wikipedia) to only allow or block access to the websites containing that keyword.

2) If you wish to block all internet browsing access, do not add any keyword to the [Whitelist](#).

10. Enter the keywords or websites you want to add and click [Save](#).

Done!

Now you can control your children's internet access according to your needs.

Chapter 8

SMS

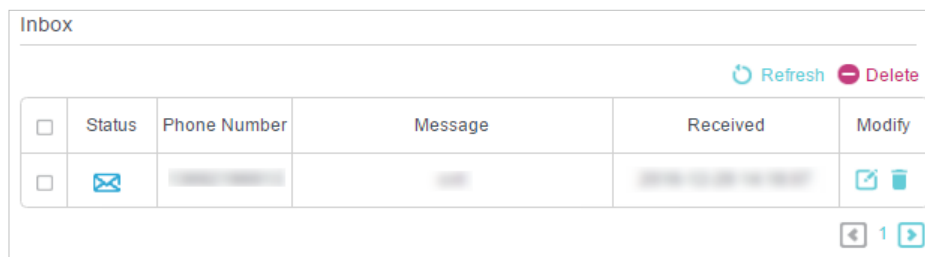

This chapter introduces how to use the SMS functions to view and write messages, keep drafts and specify the message center number. You can easily monitor your data usage by sending a message to your carrier.

This chapter includes the following sections:

- [View Messages](#)
- [Edit and Send a New Message](#)
- [View Sent Messages](#)
- [View Drafts](#)
- [SMS Settings](#)

8.1. View Messages

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [SMS](#) > [Inbox](#) page.

3. Click the  or  icon to unfold and read the content of the message.

☞ Tips:

 indicates the message is read, while  indicates the message is unread.

8.2. Edit and Send a New Message

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [SMS](#) > [New Message](#) page.

3. Enter the receiver's phone number in the [Phone Number](#) field.
4. Enter your message in the [Message](#) field.

☞ Tips:

You can enter up to 160 letters or numbers, and any exceeding characters will be sent in the next message. You can send up to 5 messages each time.

- Click [Send](#) to send the message or click [Save](#) to save the message to the Drafts.

8.3. View Sent Messages

- Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
- Go to [Advanced](#) > [SMS](#) > [Outbox](#) page. All the messages you sent are listed in the [Outbox](#) table.

Outbox				
<input type="checkbox"/>	Phone Number	Message	Send	Modify
--	--	--	--	--

Tips:

You can click to edit and forward the message.

8.4. View Drafts

- Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
- Go to [Advanced](#) > [SMS](#) > [Drafts](#) page. All the unsent messages are listed in the [Drafts](#) table.

Drafts			
<input type="checkbox"/>	Phone Number	Message	Modify
<input type="checkbox"/>	---	---	

Tips:

You can click to edit and forward the message.

8.5. SMS Settings

SMS Settings allows you to configure the Message Center. When the Message Center is enabled, you can change the Message Center Number via which messages will be

sent. It is not recommended to change it for a wrong message center number will affect the SMS function of the router.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [SMS](#) > [SMS Settings](#) page and enable [Message Center](#).

SMS Settings

Message Center:

Message Center Number:

Save

3. The [Message Center Number](#) is auto-populated. Change it according to your needs.

Chapter 9

Guest Network

This function allows you to provide Wi-Fi access for guests without disclosing your main network. When you have guests in your house, apartment, or workplace, you can create a guest network for them. In addition, you can customize guest network options to ensure network security, privacy, and fluency.

This chapter contains the following sections:

- [Create a Network for Guests](#)
- [Customize Guest Network Options](#)

9.1. Create a Network for Guests

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Guest Network](#). Locate the [Wireless](#) section.
3. Create a 2.4GHz guest network.
 - 1) Enable [2.4GHz](#) wireless guest network.
 - 2) Customize the SSID. Don't select [Hide SSID](#) unless you want your guests to manually input the SSID for guest network access.
 - 3) Set [Security](#) to [WPA/WPA2 Personal](#), keep the default [Version](#) and [Encryption](#) values, and customize your own password.

Wireless

2.4GHz Wireless: Enable Guest Network

Network Name (SSID): Hide SSID

Security: No Security WPA/WPA2 Personal

Version: Auto WPA2-PSK

Encryption: Auto TKIP AES

Password:

Save

4. Click [Save](#). Now your guests can access your guest network using the SSID and password you set!

Tips:

To view guest network information, go to [Advanced](#) > [Status](#) and locate the [Guest Network](#) section.

9.2. Customize Guest Network Options

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Guest Network](#). Locate the [Settings](#) section.
3. Customize guest network options according to your needs.

Settings

Allow Guests to Access Each Other

Allow Guests to Access My Local Network

Save

- [Allow Guests to See Each Other](#)

Select this checkbox if you want to allow the wireless clients on your guest network to communicate with each other via methods such as network neighbors, Samba, Ping, and FTP.

- [Allow Guests to Access My Local Network](#)

Select this checkbox if you want to allow the wireless clients on your guest network to communicate with the devices connected to your router's LAN ports or main network via methods such as network neighbors, Samba, Ping, and FTP.

4. Click [Save](#). Now you can ensure network security, privacy, and fluency!

 **Tips:**

To view guest network information, go to [Advanced](#) > [Status](#) and find the [Guest Network](#) section.

Chapter 10

NAT Forwarding

Router's NAT (Network Address Translation) feature makes the devices in the LAN use the same public IP address to communicate in the internet, which protects the local network by hiding IP addresses of the devices. However, it also brings about the problem that external host cannot initiatively communicate with the specified device in the local network.

With forwarding feature the router can penetrate the isolation of NAT and allows the external hosts on the internet to initiatively communicate with the devices in the local network, thus to realize some special functions.

TP-Link router includes four forwarding rules. If two or more rules are set, the priority of implementation from high to low is Virtual Servers, Port Triggering, UPnP and DMZ.

This chapter contains the following sections:

- [Translate Address and Port by ALG](#)
- [Share Local Resources in the Internet by Virtual Server](#)
- [Open Ports Dynamically by Port Triggering](#)
- [Make Applications Free from Port Restriction by DMZ](#)
- [Make Xbox Online Games Run Smoothly by UPnP](#)

10.1. Translate Address and Port by ALG

ALG (Application Layer Gateway) allows customized NAT (Network Address Translation) traversal filters to be plugged into the gateway to support address and port translation for certain application layer “control/data” protocols: FTP, TFTP, H323 etc. Enabling ALG is recommended.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password or your TP-Link ID.
2. Go to [Advanced](#) > [NAT Forwarding](#) > [ALG](#).

Note: It is recommended to keep the default settings.

ALG	
PPTP Pass-through:	<input checked="" type="checkbox"/> Enable
L2TP Pass-through:	<input checked="" type="checkbox"/> Enable
IPSec Pass-through:	<input checked="" type="checkbox"/> Enable
FTP ALG:	<input checked="" type="checkbox"/> Enable
TFTP ALG:	<input checked="" type="checkbox"/> Enable
H323 ALG:	<input checked="" type="checkbox"/> Enable
SIP ALG:	<input checked="" type="checkbox"/> Enable
RTSP ALG:	<input checked="" type="checkbox"/> Enable

Save

- **PPTP Pass-through:** If enabled, it allows Point-to-Point sessions to be tunneled through an IP network and passed through the router.
- **L2TP Pass-through:** If enabled, it allows Layer 2 Point-to-Point sessions to be tunneled through an IP network and passed through the router.
- **IPSec Pass-through:** If enabled, it allows IPSec (Internet Protocol Security) to be tunneled through an IP network and passed through the router. IPSec uses cryptographic security services to ensure private and secure communications over IP networks.
- **FTP ALG:** If enabled, it allows FTP (File Transfer Protocol) clients and servers to transfer data via NAT.
- **TFTP ALG:** If enabled, it allows TFTP (Trivial File Transfer Protocol) clients and servers to transfer data via NAT.
- **H323 ALG:** If enabled, it allows Microsoft NetMeeting clients to communicate via NAT.
- **SIP ALG:** If enabled, it allows clients communicate with SIP (Session Initiation Protocol) servers via NAT.

- **RTSP ALG:** If enabled, it allows RTSP (Real-Time Stream Protocol) clients and servers to transfer data via NAT.

10.2. Share Local Resources in the Internet by Virtual Server

When you build up a server in the local network and want to share it on the internet, Virtual Server can realize the service and provide it to the internet users. At the same time virtual server can keep the local network safe as other services are still invisible from the internet.

Virtual server can be used for setting up public services in your local network, such as HTTP, FTP, DNS, POP3/SMTP and Telnet. Different service uses different service port. Port 80 is used in HTTP service, port 21 in FTP service, port 25 in SMTP service and port 110 in POP3 service. Please verify the service port number before the configuration.

I want to:

Share my personal website I've built in local network with my friends through the internet.

For example, the personal website has been built in my home PC (192.168.1.100). I hope that my friends in the internet can visit my website in some way. The PC is connected to the router with the WAN IP address 218.18.232.154.

How can I do that?

1. Assign a static IP address to your PC, for example 192.168.1.100.
2. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > NAT Forwarding > Virtual Servers**, click **Add**.

Virtual Servers

+ Add - Delete

☐	ID	Service Type	External Port	Internal IP	Internal Port	Protocol	Status	Modify
--	--	--	--	--	--	--	--	--

Note: Virtual Server can be configured only when there is an available interface. If the external port is already used for Remote Management or CWMP, Virtual Server will not take effect.

Service Type: View Existing Applications

External Port: (XX-XX or XX)

Internal IP:

Internal Port: (XX or Blank, 1-65535)

Protocol: ▼

Enable This Entry

Cancel
Save

4. Click [View Existing Applications](#), and choose [HTTP](#). The external port, internal port and protocol will be auto-populated. Enter the PC's IP address 192.168.1.100 in the [Internal IP](#) field.
5. Click [Save](#) to save the settings.

■ **Note:**

1. It is recommended to keep the default settings of [Internal Port](#) and [Protocol](#) if you are not clear about which port and protocol to use.
2. If the service you want to use is not in the [Service Type](#), you can enter the corresponding parameters manually. You should verify the port number that the service needs.
3. You can add multiple virtual server rules if you want to provide several services in a router. Please note that the [External Port](#) cannot be overlapped.

Done!

Users in the internet can enter [http:// WAN IP](#) (in this example, enter [http:// 218.18.232.154](#)) to visit your personal website.

■ **Note:**

1. WAN IP should be a public IP address. For the WAN IP is assigned dynamically by ISP, it is recommended to apply and register a domain name for the WAN by DDNS, go to [Set Up a Dynamic DNS Service Account](#) for more information. Then you can use [http://domain name](#) to visit the website.
2. If you have changed the default [External Port](#), you should use [http://WAN IP: External Port](#) or [http://domain name: External Port](#) to visit the website.

10.3. Open Ports Dynamically by Port Triggering

Port triggering can specify a triggering port and its corresponding external ports. When a host in the local network initiates a connection to the triggering port, all the external ports will be opened for subsequent connections. The router can record the IP address of the host. When the data from the internet return to the external ports, the

router can forward them to the corresponding host. Port triggering is mainly applied to online games, VoIPs and video players. Common applications include MSN Gaming Zone, Dialpad and Quick Time 4 players, etc.

Follow the steps below to configure the port triggering rules:

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [NAT Forwarding](#) > [Port Triggering](#) and click [Add](#).

Port Triggering

+ Add - Delete

<input type="checkbox"/>	ID	Application	Triggering Port	Triggering Protocol	External Port	External Protocol	Status	Modify
--	--	--	--	--	--	--	--	--

Application: [View Existing Applications](#)

Triggering Port: (XX, 1-65535)

Triggering Protocol: ▼

External Port: (XX or XX-XX, 1-65535, at most 5 pairs)

External Protocol: ▼

Enable This Entry

[Cancel](#) [Save](#)

3. Click [View Existing Applications](#), and select the desired application. The triggering port and protocol, the external port and protocol will be auto-populated. Here we take application [MSN Gaming Zone](#) as an example.
4. Click [Save](#) to make the settings take effect.

☞ Tips:

1. You can add multiple port triggering rules according to your network need.
2. If the application you need is not listed in the [Existing Applications](#) list, please enter the parameters manually. You should verify the external ports the application uses first and enter them into [External Port](#) field according to the format the page displays.

10.4. Make Applications Free from Port Restriction by DMZ

When a PC is set to be a DMZ (Demilitarized Zone) host in the local network, it is totally exposed to the internet, which can realize the unlimited bidirectional communication between internal hosts and external hosts. The DMZ host becomes a virtual server with all ports opened. When you are not clear about which ports to open in some special

applications, like IP camera and database software, you can set the PC to be a DMZ host.

Note:

DMZ is more applicable in the situation that users are not clear about which ports to open. When it is enabled, the DMZ host is totally exposed to the internet, which may bring some potential safety hazard. If DMZ is not in use, please disable it in time.

I want to:

Make the home PC join the internet online game without port restriction.

For example, due to some port restriction, when playing the online games, you can log in normally but cannot join a team with other players. To solve this problem, set your PC as a DMZ with all ports opened.

How can I do that?

1. Assign a static IP address to your PC, for example 192.168.1.100.
2. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > NAT Forwarding > DMZ** and select the checkbox to enable DMZ.

DMZ

DMZ: Enable

DMZ Host IP Address: 192 . 168 . 1 . 100

Save

4. Enter the IP address 192.168.1.100 in the **DMZ Host IP Address** field.
5. Click **Save** to save the settings.

Done!

The configuration is completed. You've set your PC to a DMZ host and now you can make a team to game with other players.

10.5. Make Xbox Online Games Run Smoothly by UPnP

UPnP (Universal Plug and Play) protocol allows the applications or host devices to automatically find the front-end NAT device and send request to it to open the corresponding ports. With UPnP enabled, the applications or host devices in the both sides of NAT device can freely communicate with each other, realizing the seamless connection of the network. You may need to enable the UPnP if you want

to use applications for multiplayer gaming, peer-to-peer connections, real-time communication (such as VoIP or telephone conference) or remote assistance, etc.

🔗 Tips:

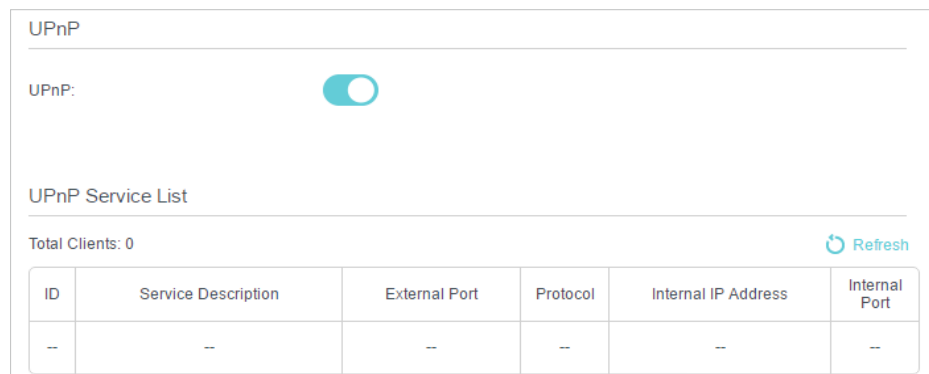

1. UPnP is enabled by default in this router.
2. Only the application supporting UPnP protocol can use this feature.
3. UPnP feature needs the support of operating system (e.g. Windows Vista/ Windows 7/ Windows 8, etc. Some of operating system need to install the UPnP components).

For example, when you connect your Xbox to the router which has connected to the internet to play online games, UPnP will send requests to the router to open the corresponding ports, allowing the following data penetrating the NAT to transmit. Therefore, you can play Xbox online games without a hitch.

If necessary, you can follow the steps to change the status of UPnP.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router;
2. Go to **Advanced** > **NAT Forwarding** > **UPnP** and toggle on or off according to your needs.

Chapter 11

Specify Your Network Settings

This chapter introduces how to change the default settings or adjust the basic configuration of the router using the web-based management page.

This chapter contains the following sections:

- [Upgrade Your ISP Information](#)
- [PIN Management](#)
- [Data Settings](#)
- [LAN Settings](#)
- [Wireless Settings](#)
- [Set Up a Dynamic DNS Service Account](#)
- [Create Static Routes](#)
- [IPv6 Tunnel](#)
- [USSD](#)

11.1. Upgrade Your ISP Information

If your ISP information is not detected by the router, you can upgrade ISP information by following the steps below:

1. Download the latest ISP upgrade file from the [Support](#) page at www.tp-link.com to your computer.
1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [ISP Upgrade](#).

ISP Upgrade

If you fail to dial-up Internet access after upgrading to the latest version, please contact us.

Current ISP Version 19110702

New ISP file: [Browse](#)

[Upgrade](#)

3. Click [Browse](#) to locate and select the latest file.
4. Click [Upgrade](#).

Note:

1. If you fail to dial-up Internet access after upgrading to the latest version, please contact the technical support.
2. If your ISP settings are still not detected after upgrading, refer to [Create a Connection Profile](#) to add a new internet connection profile.

11.2. PIN Management

PIN (Personal Identification Number) is used to protect the SIM card from embezzlement. PIN Management allows you to easily change the PIN settings of your SIM card as needed.

Follow the steps below to change your PIN settings.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [PIN Management](#) page.

The screenshot shows a web interface for PIN Management. At the top, it says "PIN Management". Below that, there are four rows of settings:

- SIM Card Status: Ready
- PIN Lock: [toggle switch is turned on]
- Auto-unlock PIN: [toggle switch is turned on]
- PIN: [input field] Remaining Attempts: 3

A blue "Save" button is located at the bottom right of the form.

- **SIM Card Status** - Displays the status of your SIM card.
 - **PIN Lock** - Toggle on to enable PIN Lock. Once it is enabled, every time you start the router with this SIM card inserted, you need to enter the PIN.
 - **Auto-unlock PIN** - When the PIN is required upon router restarting or inserting a SIM card, it will be validated automatically, saving you the trouble to enter the PIN each time you start the router or insert a SIM card. If validation failed, you need to enter the PIN on this page.
 - **PIN** - Enter the PIN to unlock the SIM card. It consists of 4-8 digits.
 - **PUK** - PIN Unlocked Key, also known as Personal Unlock Code (PUC), is used to reset a PIN that has been lost or forgotten. The PUK is a SIM-specific code assigned by the service provider. You need to enter the PUK after 3 incorrect login attempts of PIN. Contact your service provider if you do not know the PUK. It consists of 8 digits.
 - **New PIN** - Enter 4-8 digits to reset the PIN of your SIM card.
 - **Remaining Attempts** - Shows how many attempts are left for you to try entering the PIN or PUK. You have only 3 attempts for entering the PIN and 10 attempts for entering the PUK. If you accidentally fail in 3 attempts, the SIM card will be locked and you will be required to enter the PUK that is written on your SIM card.
3. Click **Save** to save the settings.

11.3. Data Settings

Data Settings is used to monitor the data usage of your router in real-time. You can limit your data usage according to your monthly allowance or total allowance and you will receive a warning if your data usage reaches the specified level.

Follow the steps below to monitor your data usage.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **Network** > **Data Settings** page.

Data Settings

Monthly Used: 0.000 MB [Correct](#)

You can send messages to your carrier for accurate data usage.

Data Limit:

The router will automatically disconnect from the network when the data usage limit is reached.

Monthly Allowance: MB

Usage Alert: %

SMS Alert for Usage: [Send Test Message](#)

Note: This function may cause SMS charges.

Monthly Data Statistics:

Start Date:

[Save](#)

3. Enable [Data Limit](#) to set total/monthly data allowance and usage alert to prevent data overuse.
4. Enter the allowed amount of total/monthly data in the [Total/Monthly Allowance](#) field. When data usage exceeds the allowed level, the router will disconnect from the internet and notify you on the [Basic > Network Map](#) Page.
5. Enter a percentage in the [Usage Alert](#) field to prevent data overuse. When data usage reaches the alert level, a warning will be shown on the [Basic > Network Map](#) Page. If you want to want receive the alert on your phone, enter your mobile phone number in the [SMS Alert for Usage](#) field.
6. Enable [Monthly Data Statistics](#) to reset data statistics when the next billing cycle starts.
7. Enter the start date of the billing cycle in the [Start Date](#) field.
8. Click [Save](#) to save the settings.

11.4. LAN Settings

11.4.1. Change the LAN IP Address

The router is preset with a default LAN IP 192.168.1.1, which you can use to log in to its web management page. The LAN IP address together with the Subnet Mask also defines the subnet that the connected devices are on. If the IP address conflicts with another device on your local network or your network requires a specific IP subnet, you can change it.

Follow the steps below to change your IP address.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.

- Go to [Advanced](#) > [Network](#) > [LAN Settings](#) page.

DHCP Server	
MAC Address:	EC-17-2F-03-95-D9
IP Address:	<input type="text" value="192 . 168 . 1 . 1"/>
Subnet Mask:	<input type="text" value="255.255.255.0"/>
IGMP Snooping:	<input type="checkbox"/> Enable
Second IP:	<input type="checkbox"/> Enable

- Type in a new [IP Address](#) as needed.
- Select the [Subnet Mask](#) from the drop-down list. The subnet mask together with the IP address identifies the local IP subnet.
- You can configure the router's [Second IP](#) and [Subnet Mask](#) for LAN interface through which you can also access the web management page.
- Leave the rest of the default settings as they are.
- Click [Save](#) to make the settings effective.

11. 4. 2. Use the 4G LTE Router as a DHCP Server

You can configure the router to act as a DHCP server to assign IP addresses to its clients. To use the DHCP server function of the router, you must configure all computers on the LAN to obtain an IP Address automatically.

Follow the steps below to configure DHCP server.

- Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
- Go to [Advanced](#) > [Network](#) > [LAN Settings](#) page.

DHCP:	<input checked="" type="checkbox"/> Enable
IP Address Pool:	<input type="text" value="192 . 168 . 1 . 100"/> - <input type="text" value="192 . 168 . 1 . 199"/>
Address Lease Time:	<input type="text" value="1440"/> minutes. (1-2880. The default value is 1440.)
Default Gateway:	<input type="text" value="192 . 168 . 1 . 1"/> (Optional)
Default Domain:	<input type="text"/> (Optional)
Primary DNS:	<input type="text" value="0 . 0 . 0 . 0"/> (Optional)
Secondary DNS:	<input type="text" value="0 . 0 . 0 . 0"/> (Optional)

[Save](#)

- Select [DHCP](#) to enable the DHCP function and select [DHCP Server](#).

4. Specify the **IP Address Pool**, the start address and end address must be on the same subnet with LAN IP. The router will assign addresses within this specified range to its clients. It is from 192.168.1.100 to 192.168.1.199 by default.
5. Enter a value for the **Address Lease Time**. The **Address Lease Time** is the amount of time in which a DHCP client can lease its current dynamic IP address assigned by the router. After the dynamic IP address expires, the user will be automatically assigned a new dynamic IP address. The default is 1440 minutes.
6. Keep the rest of the settings as default and click **Save** to make the settings effective.

Note:

1. The router can be configured to work as a **DHCP Relay**. A DHCP relay is a computer that forwards DHCP data between computers that request IP addresses and the DHCP server that assigns the addresses. Each of the device's interfaces can be configured as a DHCP relay. If it is enabled, the DHCP requests from local PCs will be forwarded to the DHCP server that runs on WAN side.
2. You can also appoint IP addresses within a specified range to devices of the same type by using **Condition Pool** feature. For example, you can assign IP addresses within the range (192.168.1.50 to 192.168.1.80) to Camera devices, thus facilitating the network management. Enable DHCP feature and configure the parameters according to your actual situation on **Advanced > Network > LAN Settings** page.

11.4.3. Reserve LAN IP Addresses

You can view and add a reserved address for a client. When you specify an IP address for a device on the LAN, that device will always receive the same IP address each time when it accesses the DHCP server. If there are some devices in the LAN that require permanent IP addresses, please configure Address Reservation on the router for the purpose.

Follow the steps below to reserve an IP address for your device.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Network > LAN Settings** page.
3. Scroll down to locate the **Address Reservation** table and click **Add** to add an address reservation entry for your device.

Address Reservation

+ Add - Delete

<input type="checkbox"/>	MAC Address	Reserved IP Address	Group	Status	Modify
--	--	--	--	--	--

MAC Address:

IP Address:

Group: ▼

Enable This Entry

4. Click [Scan](#) and select the device for which you want to reserve IP address. Then the [MAC Address](#) and [IP Address](#) will be automatically filled in. Or enter the [MAC Address](#) and [IP Address](#) manually.
5. Specify the IP address which will be reserved by the router.
6. Check to [Enable this entry](#) and click [Save](#) to make the settings effective.

11.5. Wireless Settings

11.5.1. Specify Basic Wireless Settings

The router's wireless network name (SSID) and password, and security options are preset in the factory. The preset SSID and password can be found on the product label. You can customize the wireless settings according to your needs.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Basic](#) > [Wireless](#) page.

Wireless Settings

2.4GHz Wireless Network: Enable

Network Name (SSID): Hide SSID

Password:

- To enable or disable the wireless function:

Enable the [Wireless Network 2.4GHz](#). If you don't want to use the wireless function, just uncheck the box. If you disable the wireless function, all the wireless settings won't be effective.

- **To change the wireless network name (SSID) and wireless password:**

Enter a new SSID. The default SSID is TP-Link_XXXX and the value is case-sensitive.

Note:

If you use a wireless device to change the wireless settings, you will be disconnected when the settings are effective. Please write down the new SSID and password for future use.

- **To hide SSID:**

Select Hide SSID, and your SSID will not broadcast. Your SSID won't display when you scan for local wireless network list on your wireless device and you need to manually join the network.

- **To change the mode or channel:**

Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#) page.

- **Mode** - Select the desired mode.
 - [802.11n only](#) - Select only if all of your wireless clients are 802.11n devices.
 - [802.11gn mixed](#) - Select if you are using both 802.11g and 802.11n wireless clients.
 - [802.11bgn mixed](#) - Select if you are using a mix of 802.11b, 11g, and 11n wireless clients.

Note:

When 802.11n only mode is selected, only 802.11n wireless stations can connect to the router. It is strongly recommended that you select 802.11bgn mixed, and all of 802.11b, 802.11g, and 802.11n wireless clients can connect to the router.

- **Channel** - Select the channel you want to use from the drop-down list. This field determines which operating frequency will be used. It is not necessary to change the wireless channel unless you notice interference problems with another nearby access point.
- **Channel Width** - Select the channel width from the drop-down list. The default setting is [Auto](#), which can adjust the channel width for your clients automatically.
- **Transmit Power** - Select either High, Middle, or Low to specify the data transmit power. The default and recommended setting is [High](#).
- **To change the security option:**
 1. Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#) page.
 2. Select an option from the [Security](#) drop-down list. The router provides four options, None, WPA/WPA2 Personal (Recommended), WPA/WPA2 Enterprise, WEP. WPA2

uses the newest standard and the security level is the highest. We recommend you don't change the default settings unless necessary.

11.5.2. Use WPS for Wireless Connection

Wireless devices that support WPS, including Android phones, tablets, most USB network cards, can be connected to your router through this method. (WPS is not supported by iOS devices.)

Note:

The WPS function cannot be configured if the wireless function of the router is disabled. Also, the WPS function will be disabled if your wireless encryption is WEP. Please make sure the wireless function is enabled and is configured with the appropriate encryption before configuring the WPS.

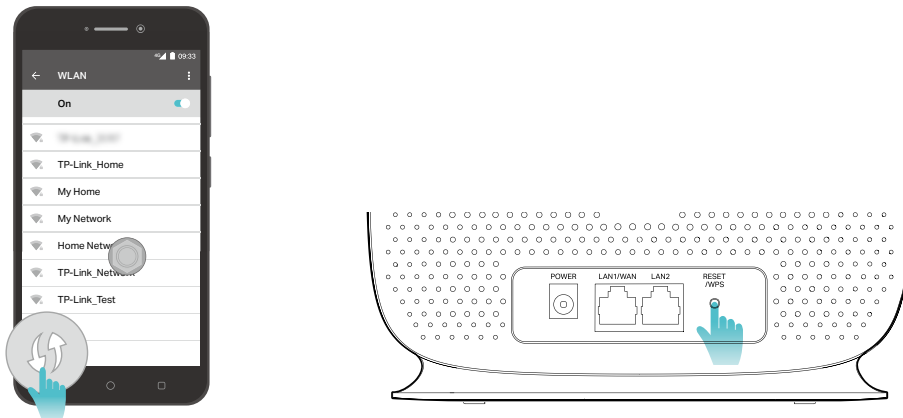

Method 1 Use the Wi-Fi Protected Setup Button

Use this method if your client device has a Wi-Fi Protected Setup button.

1. Press the WPS/RESET button on the back panel of the router for 1 second.

Note:

You can also use the Push button on the web management page. Go to **Advanced > Wireless > WPS** page and click the Start WPS button on the screen.

2. Press the WPS button of the client device within two minutes.

Method 2 Enter the client device's PIN on the router

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Wireless > WPS** page.

3. Select **Method Two--PIN** and select **Client's PIN** radio button.
4. Enter the client device's PIN in the field, then click **Connect**.
5. **Connect successfully** will appear on the above screen, which means the client device has successfully connected to the router.

Method 3 Enter the router's PIN on your client device

Use this method if your client device asks for the router's PIN.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Wireless > WPS** page.

3. Take a note of the Current PIN of the router. You can also click the **Generate** button to get a new PIN.
4. On the client device, enter the router's PIN. (The default PIN is also labeled on the bottom of the router.)

11.5.3. Schedule Your Wireless Function

You can automatically turn off your wireless network at time when you do not need the wireless connection.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [Wireless Schedule](#) page.
3. Toggle on the button to enable the Wireless Schedule feature.

Wireless Schedule

Wireless Schedule:

Wireless Off Time

	ID	Wireless Off Time	Repeat	Modify
<input type="checkbox"/>	--	--	--	--

From:

To:

Repeat: Every Day Selected Day

4. Set the wireless off time. Select [From](#) and [To](#) time and click [Save](#) to make the settings effective. You can repeat the schedule every day or just certain days in a week.

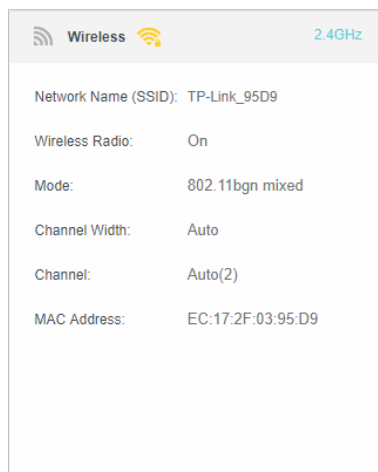

Note:

1. Please make sure that the time of the router is correct before using this function. For more details, refer to [Set System Time](#).
2. The wireless network will be automatically turned on after the time period you set.

11.5.4. View Wireless Information

- **To view the detailed wireless network settings:**

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Status](#) page. You can see the [Wireless](#) box.

📌 **Tips:**

You can also see the wireless details by clicking the router icon on [Basic > Network Map](#).

- **To view the detailed information of the connected wireless clients:**
1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Go to [Advanced > Wireless > Statistics](#) page.
 3. You can view the detailed information of the wireless clients, including its connected wireless band and security option as well as the packets transmitted.

📌 **Tips:**

You can also see the wireless details by clicking the wireless clients icon on [Basic > Network Map](#).

11.5.5. Advanced Wireless Settings

Advanced wireless settings are for those who have a network concept. If you are not familiar with the settings on this page, it's strongly recommended that you keep the provided default values; otherwise it may result in lower wireless network performance.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced > Wireless > Advanced Settings](#) page.

Advanced Settings		
Beacon Interval:	<input type="text" value="100"/>	(25-1000)
RTS Threshold:	<input type="text" value="2346"/>	(1-2346)
DTIM Interval:	<input type="text" value="1"/>	(1-255)
Group Key Update Period:	<input type="text" value="0"/>	seconds
WMM:	<input checked="" type="checkbox"/> Enable	
Short GI:	<input checked="" type="checkbox"/> Enable	
AP Isolation:	<input type="checkbox"/> Enable	

- **Beacon Interval** - Enter a value between 25 and 1000 in milliseconds to determine the duration between which beacon packets are broadcasted by the router to synchronize the wireless network. The default is 100 milliseconds.
- **RTS Threshold** - Enter a value between 1 and 2346 to determine the packet size of data transmission through the router. By default, the RTS (Request to Send) Threshold size is 2346. If the packet size is greater than the preset threshold, the router sends Request to Send frames to a particular receiving station and negotiates the sending of a data frame, or else the packet will be sent immediately.
- **DTIM Interval** - Enter a value between 1 and 255 to determine the interval of the Delivery Traffic Indication Message (DTIM). 1 indicates the DTIM Interval is the same as **Beacon Interval**.
- **Group Key Update Period** - Enter the number of seconds (minimum 30) to control the time interval for the encryption key automatic renewal. The default is 0, indicating no key renewal.
- **WMM** - This feature guarantees the packets with high-priority messages being transmitted preferentially. WMM is enabled compulsively under 802.11n or 802.11ac mode. It is strongly recommended to enable WMM.
- **Short GI** - This feature is enabled by default and recommended to increase the data capacity by reducing the Guard Interval (GI) time.
- **AP Isolation** - Select this checkbox to enable the AP Isolation feature that allows you to confine and restrict all wireless devices on your network from interacting with each other, but still able to access the internet. AP isolation is disabled by default.

11.6. Set Up a Dynamic DNS Service Account

Most ISPs (internet service providers) assign a dynamic IP address to the router and you can use this IP address to access your router remotely. However, the IP address

can change any time and you don't know when it changes. In this case, you might need the DDNS (Dynamic Domain Name Server) feature on the router to allow you and your friends to access your router and local servers (FTP, HTTP, etc.) using domain name, in no need of checking and remembering the IP address.

Note:

DDNS does not work if the ISP assigns a private WAN IP address (such as 192.168.1.x) to the router.

To set up DDNS, please follow the instructions below:

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [Dynamic DNS](#).
3. Select the [DDNS service provider](#) (DynDNS or NO-IP). If you don't have a DDNS account, select a service provider and click [Go to register](#).

4. Enter the username, password and domain name of the account (such as lisa.ddns.net).
5. Click [Log in](#) and [Save](#).

Tips:

If you want to use a new DDNS account, please log out first, then log in with the new account.

11.7. Create Static Routes

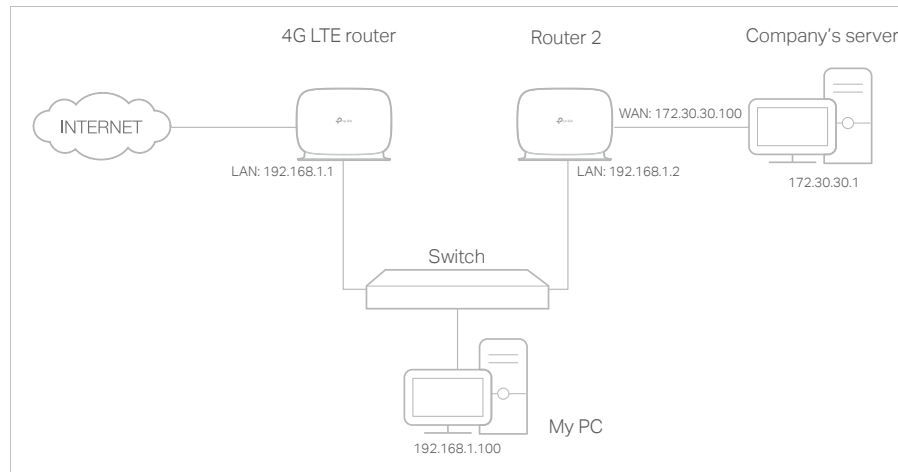

A static route is a pre-determined path that network information must travel to reach a specific host or network. Data from one point to another will always follow the same path regardless of other considerations. Normal internet usage does not require this setting to be configured.

I want to:

Visit multiple networks and multiple servers at the same time.

For example, in a small office, my PC can surf the internet, but I also want to visit my company's server. Now I have a switch and another router. I connect the devices as

shown in the following figure so that the physical connection between my PC and my company's server is achieved. To surf the internet and visit my company's network at the same time, I need to configure the static routing.

How can I do that?

1. Make sure the routers use different LAN IP addresses on the same subnet. Disable DHCP function of Router 2.
2. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > Network > Static Routing**.

Static Route						
IPv4 IPv6						
+ Add - Delete						
<input type="checkbox"/>	ID	Network Destination	Subnet Mask	Gateway	Status	Modify
--	--	--	--	--	--	--

4. Click **Add** to add a new static routing entry. Finish the settings according to the following explanations:

Static Route IPv4 | IPv6

+ Add - Delete

<input type="checkbox"/>	ID	Network Destination	Subnet Mask	Gateway	Status	Modify
--	--	--	--	--	--	--

Network Destination:

Subnet Mask:

Gateway:

Interface:

Enable This Entry

Cancel Save

- **Network Destination** - The destination IP address that you want to assign to a static route. This IP address cannot be on the same subnet with the WAN IP or LAN IP of the router. In the example, the IP address of the company network is the destination IP address, so here enters 172.30.30.1.
 - **Subnet Mask** - Determines the destination network with the destination IP address. If the destination is a single IP address, enter 255.255.255.255; otherwise, enter the subnet mask of the corresponding network IP. In the example, the destination network is a single IP, so here enters 255.255.255.255.
 - **Gateway** - The IP address of the gateway device to which the data packets will be sent. This IP address must be on the same subnet with the router's IP which sends out the data. In the example, the data packets will be sent to the LAN port of Router 2 and then to the Server, so the gateway should be 192.168.1.2
 - **Interface** - Determined by the port that sends out the data packets. In the example, the data is sent to the gateway through the LAN port.
5. Select the checkbox to enable this entry.
 6. Click **Save** to save the settings.

Done!

Open a web browser on your PC. Enter the company server's IP address to visit the company network.

11.8. IPv6 Tunnel

IPv6 Tunnel is a transition mechanism that enables IPv6-only hosts to reach IPv4 services or vice versa and allows isolated IPv6 hosts and networks to reach each other over IPv4-only infrastructure before IPv6 completely supplants IPv4. It is a temporary

solution for networks that do not support native dual-stack, where both IPv6 and IPv4 run independently.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [IPv6 Tunnel](#).
3. Enable [IPv6 Tunnel](#).
4. Specify a tunneling mechanism and select a WAN connection.
5. Save the settings.

The screenshot shows the 'IPv6 Tunnel' configuration page. At the top, there is a note: 'Note: You must reconfigure the IPv6 Tunnel settings every time you reboot the router. Make sure the desired WAN connection is connected before the configuration.' Below the note, there are three settings: 'IPv6 Tunnel' is checked and set to 'Enable'; 'Tunneling Mechanism' is set to '6to4'; and 'WAN Connection' is set to 'No available interface.' A 'Save' button is located at the bottom right of the form.

11.9. USSD

Unstructured Supplementary Service Data (USSD) is a technology that allows you to communicate with your service provider using short codes. It usually consists of a number that starts with * and ends with #. You can query various services on this page.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [USSD](#).
3. Enter the USSD request supported by the carrier and click [Send](#). You will see the message returned from the carrier in the USSD Result box.

The screenshot shows the 'USSD' configuration page. It features a text input field labeled 'USSD Request'. To the right of the input field are two buttons: 'Send' (in teal) and 'Cancel' (in grey). Below the input field is a large, empty rectangular box labeled 'USSD Result'.

Chapter 12

Administrate Your Network

This chapter introduces how to change the system settings and administrate your router's network.

This chapter contains the following sections:

- [Set System Time](#)
- [Control LEDs](#)
- [Update the Firmware](#)
- [Back up and Restore Configuration Settings](#)
- [Reboot the Modem Router](#)
- [Change the Administrator Account](#)
- [Local Management](#)
- [Remote Management](#)
- [ICMP Ping](#)
- [System Log](#)
- [CWMP](#)

12.1. Set System Time

System time is the time displayed while the router is running. The system time you configure here will be used for other time-based functions like Parental Controls and Wireless Schedule. You can manually set how to get the system time.

Follow the steps below to set your system time.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#) > [Time Settings](#) page.

The screenshot shows the 'System Time' configuration page. It includes the following elements:

- Current Time:** A text field showing the current system time.
- Time Zone:** A dropdown menu with a selected option.
- Date:** A text field for entering the date in MM/DD/YY format.
- Time:** Three dropdown menus for selecting hours (0), minutes (12), and seconds (16).
- NTP Server I:** A text field with '0.0.0.0' and '(Optional)' label.
- NTP Server II:** A text field with '0.0.0.0' and '(Optional)' label.
- Buttons:** 'Get from PC', 'Get from the Internet', and 'Save' buttons.

3. Configure the system time using the following methods :
 - Manually** - Select your time zone and enter your local time.
 - Get from PC** - Click this button if you want to use the current managing PC's time.
 - Get from the Internet** - Click this button if you want to get time from the internet. Make sure your router can access the internet before you select this way to get system time.
4. Click [Save](#) to make your settings effective.
5. After setting the system time, you can set [Daylight Saving](#) time according to your needs. Tick the checkbox to enable [Daylight Saving](#), set the start and end time and then click [Save](#) to make the settings effective.

The screenshot shows the 'Daylight Saving Time' configuration page. It includes the following elements:

- Enable Daylight Saving Time:** A checked checkbox.
- Start:** Fields for month (Mar), day (Last), day of the week (Sun), and time (02:00).
- End:** Fields for month (Oct), day (Last), day of the week (Sun), and time (03:00).
- Button:** 'Save' button.

12.2. Control LEDs

The router's LEDs indicate router's activities and status. You can turn on or turn off the LEDs either from the web management page or by pressing the LED button.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#) > [LED Control](#).

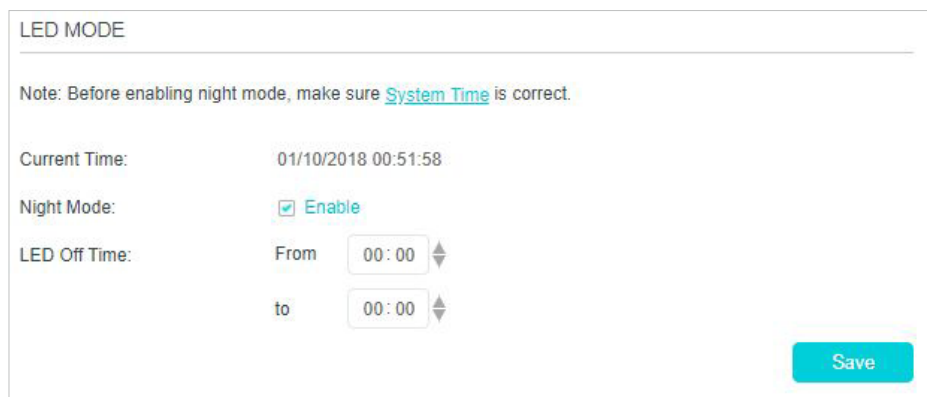

- **To turn on/off LEDs**

Toggle on or off the LED Status to turn on or off the LEDs.

- **To set up Night Mode**

1. Enable [Night Mode](#).
2. Specify a time period in the [Night Mode Period](#) as needed.

3. Click [Save](#), and then the LEDs will be off during this period.

12.3. Update the Firmware

TP-Link is dedicated to improving and enriching the product features, giving you a better network experience.

We will inform you through the web management page if there's any update firmware available for your router. Also, the latest firmware will be released at TP-Link official website, you can download it from the [Support](#) page of our website www.tp-link.com for free.

■ **Note:**

1. Make sure that you have a stable connection between the router and your computer. It is NOT recommended to upgrade the firmware wirelessly.

2. Back up your router configuration before upgrading the firmware.
3. Do NOT turn off the router during the firmware upgrade.

12.3.1. Online Upgrade

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > System Tools > Firmware Upgrade**, and click **Check for Upgrades** to see if there's any new firmware.

3. Wait a few moments for the upgrading and rebooting.

12.3.2. Local Upgrade

1. Download the latest firmware file for the router from our website www.tp-link.com.
2. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > System Tools > Firmware Upgrade**.
4. Focus on the **Device Information** section. Make sure the downloaded firmware file matches with the **Hardware Version**.
5. Focus on the **Local Upgrade** section. Click **Browse** to locate the downloaded new firmware file, and click **Upgrade**.

6. Wait a few moments for the upgrading and rebooting.

12.4. Back up and Restore Configuration Settings

The configuration settings are stored as a configuration file in the router. You can back up the configuration file to your computer for future use and restore the router to a previous settings from the backup file when needed. Moreover, if needed you can erase the current settings and reset the router to the default factory settings.

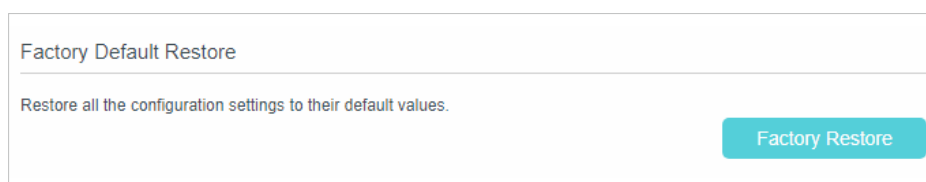

- **To back up configuration settings:**
 1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Click [Advanced](#) > [System Tools](#) > [Backup & Restore](#) page.
 3. Click [Backup](#) to save a copy of the current settings to your local computer. A conf. bin file will be stored to your computer.
- **To restore configuration settings:**
 1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Click [Advanced](#) > [System Tools](#) > [Backup & Restore](#) page.

The screenshot shows a web interface titled "Restore". Below the title is a horizontal line. Underneath, the text reads "Restore previous settings from a saved file." Below this text is a label "File:" followed by an empty text input field. To the right of the input field is a teal button labeled "Browse". Further to the right is another teal button labeled "Restore".

3. Click [Browse](#) to locate the previous backup configuration file, and click [Restore](#).
4. Wait for the restoring and then the router will automatically reboot.

- **To reset the router to factory default settings:**
 1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Click [Advanced](#) > [System Tools](#) > [Backup & Restore](#) page.

The screenshot shows a web interface titled "Factory Default Restore". Below the title is a horizontal line. Underneath, the text reads "Restore all the configuration settings to their default values." To the right of this text is a teal button labeled "Factory Restore".

3. Click [Factory Restore](#) to reset the router.
4. Wait for the resetting and then the router will automatically reboot.

■ **Note:**

1. Do not interrupt or turn off the router during the resetting process.
2. We strongly recommend you to back up the current configuration settings before resetting the router.

12.5. Reboot the Modem Router

The Reboot feature cleans the cache to enhance the running performance of the router.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#) > [Reboot](#).

- **To Reboot Manually**

Locate the [Manual Reboot](#) section and click [Reboot](#).

Manual Reboot

Reboot

- **To Reboot Automatically**

1. Locate the [Reboot Schedule](#) section and check the box to enable [Reboot Schedule](#).

Reboot Schedule

Note: Before enabling Reboot Schedule, please make sure the [System Time](#) is correct.

Current Time: 01/10/2018 00:48:58

Reboot Schedule: Enable

Reboot Time: 01:00

Repeat: Every Day

Save

2. Specify the [Reboot Time](#) when the router reboots and Repeat to decide how often it reboots.

Note:

Before enabling Reboot Schedule, please make sure your router is connected to the internet, then go to [Advanced](#) > [System Tools](#) > [Time Settings](#) and choose Get from the Internet to get the correct network time.

3. Click [Save](#).

12.6. Change the Administrator Account

Admin account is used to log in to the router's web-based management page. You are required to set the admin account at the first login. You can change it on the web page.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#) > [Administration](#) page. Locate the [Account Management](#) section.

Account Management

Old Password:

New Password: Low Middle High

Confirm New Password:

Save

3. Enter the old password. Enter the new password and enter again to confirm.
4. Click [Save](#) to make the settings effective.

12.7. Local Management

You can control the local devices' authority to manage the router via the Local Management feature. By default all local connected devices are allowed to manage the router. You can also allow only one device to manage the router.

Follow the steps below to specify the local management.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#)> [Administration](#) page. Locate the [Local Management](#) section.

Local Management

Port for HTTP:

Only Allow the Following IP/MAC: [Enable](#)

IP/MAC Address:

Save

3. Keep the Port for HTTP as the default settings.
4. If you only want to allow one specific device to manage the router, enable [Only Allow the Following IP/MAC](#) and then enter the [IP Address](#) or [MAC Address](#) of the device in the IP/MAC Address field.
5. Click [Save](#) to make the settings effective.

12.8. Remote Management

By default, the remote devices are not allowed to manage the router from the internet.

Follow the steps below to allow remote devices to manage the router.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#)> [Administration](#) page. Locate the [Remote Management](#) section.

The screenshot shows the 'Remote Management' configuration page. At the top, the title 'Remote Management' is displayed. Below it, the 'Remote Management' checkbox is checked and labeled 'Enable'. The 'Port' is set to '80'. Under 'Manage This Router via the Address:', there is an empty text input field. The 'Client Device Allowed for Remote Management:' section has two radio button options: 'Only the Following IP/MAC Address' (unselected) and 'All' (selected). Below the 'Only the Following IP/MAC Address' option is another empty text input field. A blue 'Save' button is located at the bottom right of the form.

3. Enable [Remote Management](#).
4. Keep the [Port](#) as the default setting.
5. If you only want to allow one specific device to manage the router, select [Only the Following IP/MAC Address](#) and then enter the [IP Address](#) or [MAC Address](#). If you want to allow all remote devices can access the router, select [All](#).
6. Click [Save](#) to make the settings effective.

 Tips:

1. You can find the WAN IP address of the router on [Basic](#) > [Network Map](#) > [Internet](#).
2. The router's WAN IP is usually a dynamic IP. Please refer to [Set Up a Dynamic DNS Service Account](#) if you want to log in to the router through a domain name.

12.9. ICMP Ping

ICMP (Internet Control Message Protocol) Ping is used to diagnose the network by sending ICMP echo request packets to the target remote or local host and waiting for an ICMP response.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Click [Advanced](#) > [System Tools](#) > [Administration](#) page. Locate the [ICMP Ping](#) section.

3. Select **Remote** if you want the computers on a public network to ping the router's WAN IP address. Select **Local** if you want the computers on a private network to ping the router's LAN IP address. Or select both.
4. Click **Save** to make the settings effective.

12. 10. System Log

System Log can help you know what happens to your router, facilitating you to locate the malfunctions. For example when your router does not work properly, you will need to save the system log and send it to the technical support for troubleshooting.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Click **Advanced > System Tools > System Log** page.

ID	Time	Type	Level	Log Content
1		DHCPD	Notice	Send ACK to 192.168.1.100
2		DHCPD	Notice	Recv REQUEST from 40:8D:5C:89:74:B5
3		DHCPD	Notice	Send OFFER with ip 192.168.1.100
4		DHCPD	Notice	Recv DISCOVER from 40:8D:5C:89:74:B5
5		SYSTEM	Notice	Enable access control

- **To view the system logs:**
 1. Select the log Type. Select **ALL** to view all kinds of logs, or select **DHCPD** or **IGMP** to view the specific logs.
 2. Select the log Level and you will see the logs with the specific or higher levels.

3. Click [Refresh](#) to refresh the log list.

- **To save the system logs:**

You can choose to save the system logs to your local computer or a remote server.

1. Click [Save Log](#) to save the logs in a txt file to your computer.

2. Click [Log Settings](#) to set the save path of the logs.

Log Settings

Save Locally

Minimum Level: Information

Save Remotely

Minimum Level: Warning

Server IP: 192.168.1.100

Server Port: 514

Local Facility Name: User

Back Save

- [Save Locally](#) - Select this option to cache the system log to the router's local memory, select the minimum level of system log to be saved from the drop-down list. The logs will be shown in the table in descending order on the System Log page.
- [Save Remotely](#) - Select this option to send the system log to a remote server, select the minimum level of system log to be saved from the drop-down list and enter the information of the remote server. If the remote server has a log viewer client or a sniffer tool implemented, you can view and analyze the system log remotely in real-time.

12. 11. CWMP

CWMP (CPE WAN Management Protocol, also called TR-069) allows Auto-Configuration Server (ACS) to perform auto-configuration, provision, connection, and diagnostics to this device. You may configure this function under your ISP's instructions.

1. Visit <http://tplinkmodem.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System Tools](#) > [CWMP Settings](#).
3. Enable [CWMP](#).

CWMP Settings

CWMP:

Inform:

Inform Interval: (seconds)

ACS URL:

ACS Username:

ACS Password: 

Interface used by TR-069 client: 

Display SOAP messages on serial console:

[Connection Request Authentication](#)

Username:

Password: 

Path:

Port:

URL:

[Get RPC Methods](#)

[Save](#)

4. If you want to send an Inform message to the ACS (Auto Configuration Server) periodically, enable [Inform](#) and set the [Inform Interval](#).
5. Enter the ACS URL, username and password provided by your ISP.
6. Select the interface used by TR-069 client.
7. Determine whether to display SOAP messages on serial console or not.
8. Select the checkbox [Connection Request Authentication](#) to enable authentication for the connection request. Enter the username and password for the ACS server to log into the router. Then enter the path, port, and URL that connects to the ACS server.
9. Click [Get RPC Methods](#) to get the methods that support CWMP.
10. Save the settings.

FAQ

Q1. How do I restore my router to its factory default settings?

With the router powered on, press and hold the WPS/RESET button on the rear panel until the Power LED starts flashing.

Note:

Once the router is reset, the current configuration settings will be lost and you will need to re-configure the router.

Q2. What should I do if I forget my password?

- **Web Management Page Password:**

Restore the router to its factory default settings and then create a new password.

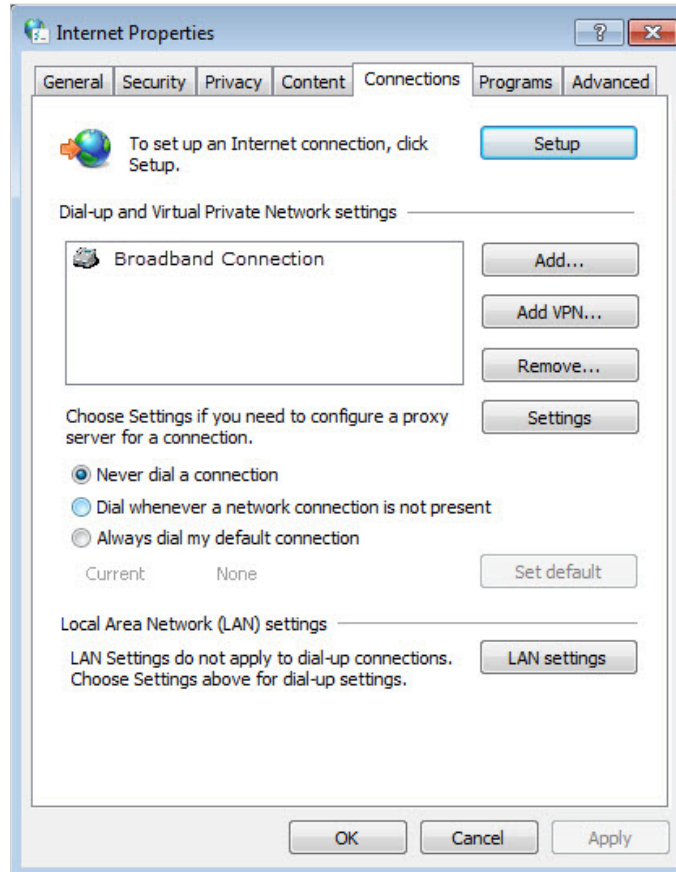

- **Wireless Network Password:**

1. The default Wireless Password/PIN is printed on the product label of the router.
2. If the default wireless password has been changed, log in to the router's web management page and go to **Basic > Wireless** to retrieve or reset your password.

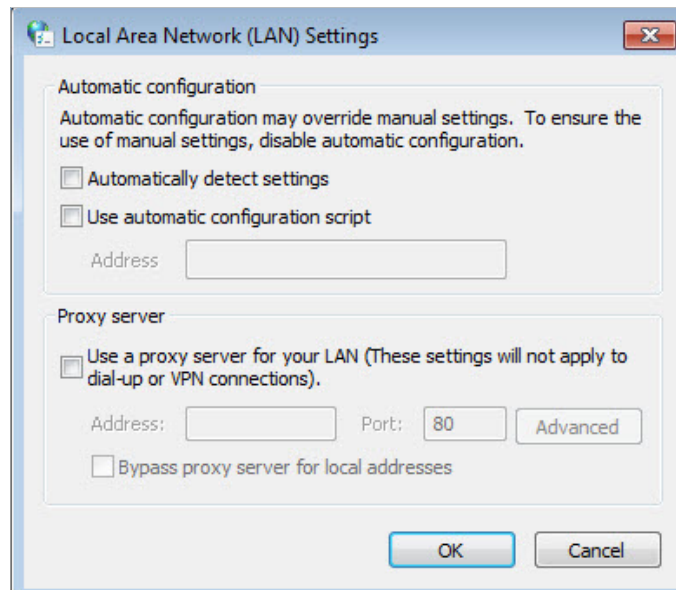

Q3. What should I do if I cannot access the web management page?

This can happen for a variety of reasons. Please try the methods below to log in again.

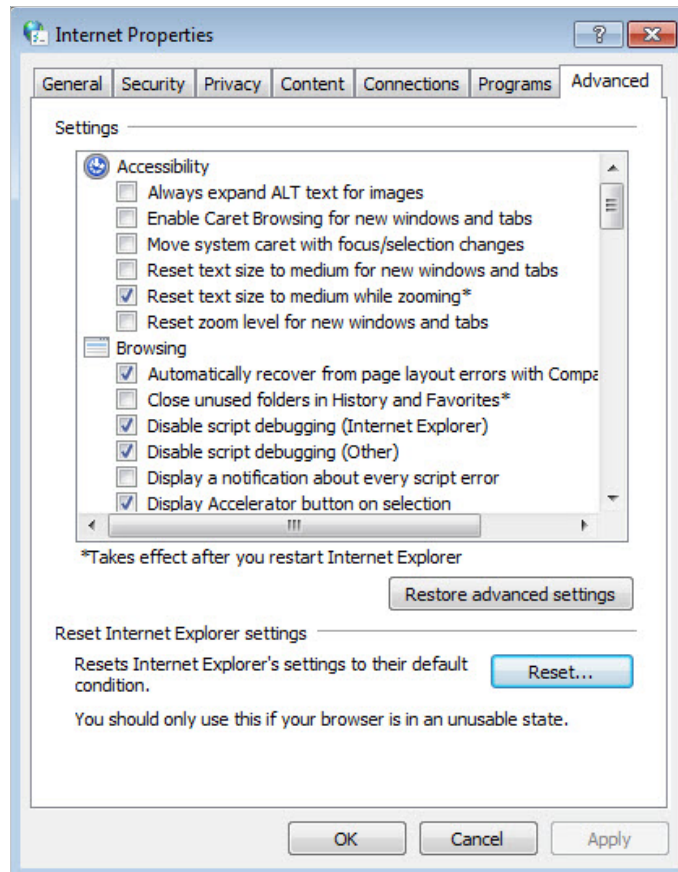

- Make sure your computer has connected to the router correctly and the corresponding LED light up.
- Make sure the IP address of your computer is configured as **Obtain an IP address automatically** and **Obtain DNS server address automatically**.
- Make sure you enter the correct IP address to log in: <http://tplinkmodem.net>.
- Check your computer's settings:
 - 1) Go to **Start > Control Panel > Network and Internet**, and click **View network status and tasks**.
 - 2) Click **Internet Options** on the bottom left.
 - 3) Click **Connections** and select **Never dial a connection**.

4) Click [LAN settings](#), deselect the following three options and click [OK](#);

5) Go to [Advanced](#) > [Restore advanced settings](#), click [OK](#) to save the settings.

- Use another web browser or computer to log in again.
- Reset the router to factory default settings and try again. If the login still fails, please contact the technical support.

■ **Note:** You'll need to reconfigure the router to surf the internet once the router is reset.

Q4. What can I do if I cannot access the internet?

1. Verify that your SIM card is an LTE or WCDMA card.
2. Verify that your SIM card is in your ISP's service area.
3. Verify that your SIM card has sufficient credit.
4. Check the LAN connection:
Open a web browser and enter <http://tplinkmodem.net> or <http://192.168.1.1> in the address bar. If the login page does not appear, refer to Q3 and then try again.
5. Check your ISP parameters:
 - 1) Open a web browser and log in to the web management page.
 - 2) Go to **Advanced** > **Network** > **Internet** to verify the parameters (including the APN, Username and Password) provided by your ISP are correctly entered. If the

parameters are incorrect, click [Create Profile](#) and enter the correct parameters, then select the new profile from the Profile Name list.

6. Check the PIN settings:
 - 1) Open a web browser and log in to the web management page.
 - 2) Go to [Advanced](#) > [Network](#) > [PIN Management](#) to verify if PIN is required. If it is, enter the correct PIN provided by your ISP or disable [PIN Lock](#), and click [Save](#).
7. Check the Data Limit:
 - 1) Open a web browser and log in to the web management page.
 - 2) Go to [Advanced](#) > [Network](#) > [Data Settings](#) to verify if the [Total Used](#) exceeds the [Total Allowance](#) or if the [Monthly Used](#) exceeds the [Monthly Allowance](#). If it does, click [Correct](#) and set [Total/Monthly Used](#) to 0 (zero), or disable [Data Limit](#).
8. Check the Mobile Data:
 - 1) Open a web browser and log in to the web management page.
 - 2) Go to [Advanced](#) > [Network](#) > [Internet](#) to verify that [Mobile Data](#) is enabled. If not, toggle it On to access the internet.
9. Check the Data Roaming:
 - 1) Confirm with your ISP if you are in a roaming service area. If you are, open a web browser and log in to the web management page.
 - 2) Go to [Advanced](#) > [Network](#) > [Internet](#) to verify that [Data Roaming](#) is enabled. If not, toggle it On to access the internet.

Q5. What should I do if my internet speed is slow?

1. Make sure you are inside a network coverage area.
2. Relocate your router and your computer to have a better signal reception – you may be in or near a structure that is blocking the signal. Obstacles (for example, walls, ceilings, and furniture) between the router and other wireless devices decrease the signal strength.

Q6. What can I do if I cannot find my wireless network or I cannot connect the wireless network?

- **If you fail to find any wireless network, please follow the steps below:**
 1. Make sure the wireless function is enabled if you're using a laptop with built-in wireless adapter. You can refer to the relevant document or contact the laptop manufacturer.
 2. Make sure the wireless adapter driver is installed successfully and the wireless adapter is enabled.

On Windows 7

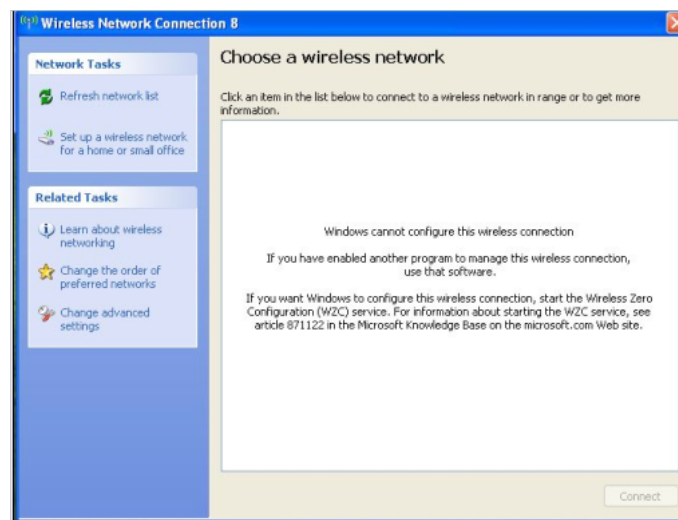

- 1) If you see the message **No connections are available**, it is usually because the wireless function is disabled or blocked somehow;

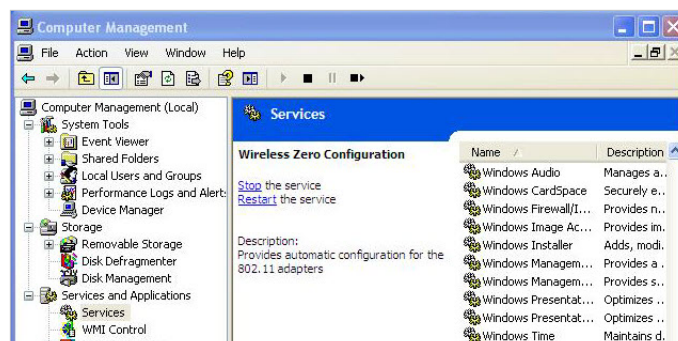

- 2) Clicking on **Troubleshoot** and windows might be able to fix the problem by itself.

On Windows XP

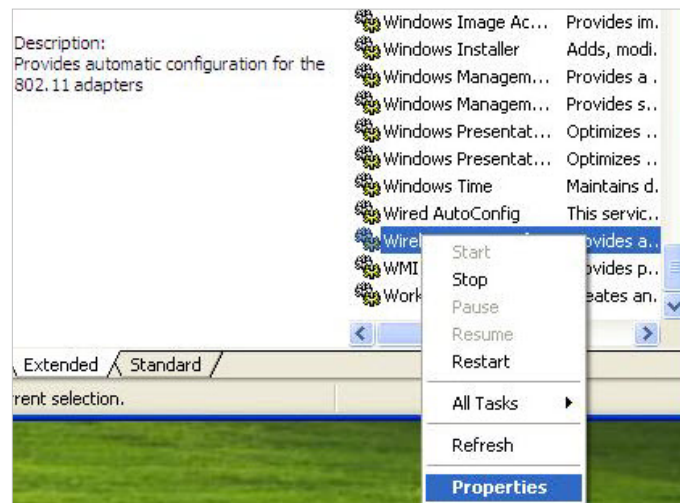

- 1) If you see the message **Windows cannot configure this wireless connection**, this is usually because windows configuration utility is disabled or you are running another wireless configuration tool to connect the wireless.

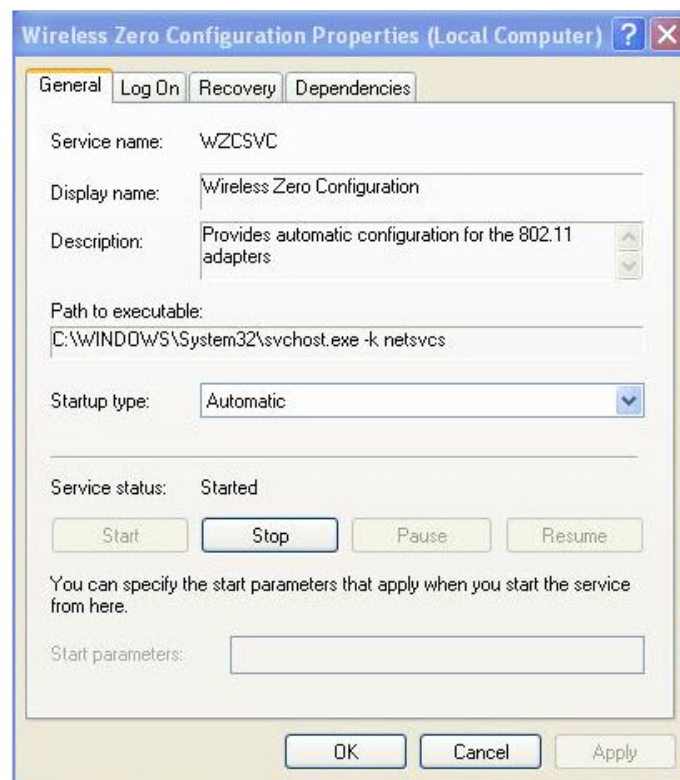

- 2) Exit the wireless configuration tool (the TP-Link Utility, for example);
- 3) Select and right click on **My Computer** on desktop, select **Manage** to open Computer Management window;
- 4) Expand **Services and Applications > Services**, find and locate **Wireless Zero Configuration** in the Services list on the right side;

5) Select **Wireless Zero Configuration**, right click it, and then select **Properties**;

6) Change **Startup type** to **Automatic**, click on **Start** button and make sure the Service status is **Started**. And then click **OK**.

7) Connect to wireless network.

- If you can find other wireless network except your own, please follow the steps below:

1. Check the WLAN LED indicator on your router;
2. Make sure your computer/device is still in the range of your router/modem, move closer if it is currently too far away;
3. Go to [Advanced > Wireless > Advanced Settings](#) page, and check the wireless router settings. Double check your Wireless Network Name, and make sure the SSID is not hidden;

4. Connect to wireless network.

- If you can find your wireless network but fail to connect, please follow the steps below:

1. Authenticating problem, password mismatch.

- 1) Sometimes it will ask you to type in a PIN number when you connect to the wireless network for the first time. This PIN number is different from the Wireless Password/Network Security Key, usually you can only find it on the back of your wireless router/modem;

- 2) If you cannot find the PIN or PIN failed, you may choose [Connecting using a security key instead](#), and then type in the Network Security Key/Wireless Password;

- 3) If it continues saying network security key mismatch, it is suggested to confirm the wireless password on your wireless router/modem;

Note: Wireless password/Network Security Key is case-sensitive.

- 4) Connect to wireless network.
2. Windows was unable to connect to XXXX /Cannot join this network/Taking longer than usual to connect to this network.
 - 1) Check the wireless signal strength of your network, if it is weak (1~3 bars), please move the router closer and try again;
 - 2) Change the wireless Channel of the router to 1,6,or 11 to reduce interference from other networks;
 - 3) Re-install or update the driver for your wireless adapter of the computer;
 - 4) Connect to wireless network.

CE Mark Warning

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

OPERATING FREQUENCY(the maximum transmitted power)

2412MHz-2472MHz (20dBm)

WCDMA: B1/B5/B8 (25dBm±1dBm)

LTE: B1/B3/B5/B7/B8/B20/B28/B38/B40/B41 (23dBm±2dBm)

EU Declaration of Conformity

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of directives 2014/53/EU, 2009/125/EC, 2011/65/EU and (EU)2015/863.

The original EU Declaration of Conformity may be found at <https://www.tp-link.com/en/support/ce/>

RF Exposure Information

This device meets the EU requirements (2014/53/EU Article 3.1a) on the limitation of exposure of the general public to electromagnetic fields by way of health protection. The device complies with RF specifications when the device used at 20 cm from your body.

UKCA Mark

UK Declaration of Conformity

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of the Radio Equipment Regulations 2017.

The original UK Declaration of Conformity may be found at <https://www.tp-link.com/support/ukca>

Korea Warning Statements

당해 무선설비는 운용중 전파혼신 가능성이 있음.

NCC Notice

注意!

取得審驗證明之低功率射頻器材，非經核准，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

低功率射頻器材之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。

前述合法通信，指依電信管理法規定作業之無線電通信。

低功率射頻器材須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。

減少電磁波影響，請妥適使用。

安全諮詢及注意事項

- 請使用原裝電源供應器或只能按照本產品注明的電源類型使用本產品。
- 清潔本產品之前請先拔掉電源線。請勿使用液體、噴霧清潔劑或濕布進行清潔。
- 注意防潮，請勿將水或其他液體潑灑到本產品上。
- 插槽與開口供通風使用，以確保本產品的操作可靠並防止過熱，請勿堵塞或覆蓋開口。
- 請勿將本產品置放於靠近熱源的地方。除非有正常的通風，否則不可放在密閉位置中。
- 請不要私自拆開機殼或自行維修，如產品有故障請與原廠或代理商聯繫。

備考 1. “超出 0.1 wt %” 及 “超出 0.01 wt %” 係指限用物質之百分比含量超出百分比含量基準值
Note 1: “Exceeding 0.1 wt %” and “exceeding 0.01 wt %” indicate that the percentage content of the restricted substance exceeds the reference percentage value of presence condition.
備考 2. “○” 係指該項限用物質之百分比含量未超出百分比含量基準值。
Note 2: “○” indicates that the percentage content of the restricted substance does not exceed the percentage of reference value of presence.
備考 3. “—” 係指該項限用物質為排除項目。
Note 3: The “—” indicates that the restricted substance corresponds to the exemption.

Продукт сертифіковано згідно с правилами системи УкрСЕПРО на відповідність вимогам нормативних документів та вимогам, що передбачені чинними законодавчими актами України.

Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use damaged charger or USB cable to charge the device.
- Do not use any other chargers than those recommended.
- Do not use the device where wireless devices are not allowed.
- Adapter shall be installed near the equipment and shall be easily accessible.
- Use only power supplies which are provided by manufacturer and in the original packing of this product. If you have any questions, please don't hesitate to contact us.
- Operating Temperature: 0°C ~ 40°C (32°F ~ 104°F)
- This product uses radios and other components that emit electromagnetic fields. Electromagnetic fields and magnets may interfere with pacemakers and other implanted medical devices. Always keep the product and its power adapter more than 15 cm (6 inches) away from any pacemakers or other implanted medical devices. If you suspect your product is interfering with your pacemaker or any other implanted medical device, turn off your product and consult your physician for information specific to your medical device.

Please read and follow the above safety information when operating the device. We cannot guarantee that no accidents or damage will occur due to improper use of the device. Please use this product with care and operate at your own risk.
