 Keep the protective film during installation and remove it before use.

Install micro SD card (Optional)

Connect Alarm/Audio Device (Optional)

Refer to <https://www.tp-link.com/support/faq/4041> for more details.

Connect Alarm Device**Connect Audio Device**

Waterproof Cables (Optional)

For Ethernet Cable**For Power Cord**

- Powered by the adapter

- Powered by PoE

**For Alarm/Audio Interface**

Configuration

Here is a typical network topology. You can add and manage your devices via any of the methods.

■ Via NVR

The camera works with an NVR for easier batch access and management. Here we use a VIGI NVR as an example.

1. Connect your cameras to the same network as your NVR.
2. Power on your cameras with the PoE power supply or an external power supply.
3. Right click on the Live View screen on the monitor, and click Add Camera.
4. Select your camera and click + to add your camera directly. If you have disabled Plug and Play on your NVR, create a password or use a preset password for your camera.

Note:

If you are using your cameras with other NVR brands, follow the steps below.

1. Power on your cameras and connect them to the network.
2. Activate the cameras using the TP-Link VIGI app or web management page.
3. Refer to the NVR's User Manual to add cameras.

■ Via VIGI App

You can remotely view live video, manage device, and get instant alerts via VIGI app.

[Get It Now](#)[Get It Now](#)

TP-Link VIGI App

■ Via Web

You can view live video and modify camera settings via a web browser.

1. Find the camera's IP address on your router's client page.
2. On your local computer, open a web browser and enter <https://camera's IP address> (<https://192.168.0.60> by default).
3. Select your Country/Region and Time Zone.
4. Set a password to activate the camera.
